ENVISION THE FUTURE
SCHOOL COMPETITION
—
PICK YOUR FINALISTS!
—
VOTING CLOSES ON MONDAY MAY 21 AT 10AM

All Party Parliamentary Group on
Artificial Intelligence
What will your future workplace look like?

- Smaller companies who can’t afford the more advanced technology may lose out.
- There may be more monopolies in different industries, leading to less competition and lower standards.
- Technological warfare between companies can lead to more distrust.
- A higher rate of production and products lower in price.
- People untrained who do not have the necessary skill set will be at a disadvantage.
- Industries/workplaces will become more automated.
- Increase in health of workers may mean that people work longer and retire earlier.
- Better communication between businesses due to faster network speeds.
- May cause industries to be harder to standardise.
- An increase in self employment.
- Better technology to increase productivity.

**KEY**
- Red = negative
- Green = positive
- Blue = Both

2. What do you think your future day at work will look like?

I think the future will look like that. Workers will have easy to do with technology but they will remember so much.

I would like to be an artist in the future. I'm not pretty sure if art will look like the same as now but if yes it would make for me easier. In other hand I think that the art will decorate live on the picture.

[Hand-drawn image: A person sitting at a desk with a robot drawing at the desk. Below the image:
"Drographic table"]
Curitiba: Desire vs. Reality

As seen in Curitiba, an alternative to building an expensive subway system, is a more efficient bus system:

- Roads can be built especially for buses and can therefore avoid traffic; they can deliver their passengers to their destination quickly.
- Buses can carry around hundreds of passengers at once (each vehicle is formed from several sections joined together). This can also be a substitute for railway and trains.
- Passengers can pay at the bus station.

(BBC Bitesize, n.d.)

Buses can run on solar cells by recharging them at the bus shelters (the solar panels were placed on the roof). This will be a lot cleaner alternative than just using petrol. Alternatively, the bus can be a hybrid (generating electric energy from the kinetic movement of the wheels).

(Bradley, 2012)

Skyscraper farming

A futuristic concept converts skyscrapers into crop farms that could help reduce global warming, improve the urban environment, and help feed the world’s growing population. How it would work:

**SOLAR PANEL**
Energy is supplied by a rotating solar panel that follows the sun; drives interior cooling/heating system.

**GLASS PANELS**
Clear coating of titanium oxide collects pollutants and makes rain slide down the glass where it is collected and used for watering.

**ARCHITECTURE**
Circular design allows maximum light into center.

**ECONOMY**
The plan combines farming with office and residential stories.

**IRRIGATION**
Filtered, sterilized wastewater from sewage system can be used for irrigation.

INTERNET CAFE
HELP US ENVISION THE FUTURE
1. What do you think your city will look like in 10 years?

A City in 10 years. Will have all basic tasks automated such as paying for parking. Buildings will be connected to the internet of things, but this is optional due to people wanting/not wanting personalised marketing and advertising.

Shops will be mostly the same and so will cars, but using green energy sources.
Transport will be easier with better built GPS that account with occupancy for everything.

AR or VR will be used more often and will be used as an alternative to phones. By this time the game sector would be smaller.

Voting is easier and all participatory democracy for main changes then representative for individual laws.
HELP US ENVISION THE FUTURE

2. What do you think your future day at work will look like?

I think everything will be controlled by computers.

1. What do you think your city will look like in 10 years?

I think the future town will look like that. I am not too much sure but people say what in the future cars going to fly.

I chose this picture because is the most trust that it would happen in the future (2028).

The town will have large buildings than now. The buildings will become more rich and these buildings will have different inside.

The houses will looks different than now and they will be more clever and comfortable.

The future shows that we will have better earth (in other hand bad).
HELP US ENVISION THE FUTURE
2. What do you think your future day at work will look like?

My future day at work will look like be with more but technology, and it depends what work i will do.
HELP US ENVISION THE FUTURE

2. What do you think your future day at work will look like?
there are 4 main topics

Transport is mainly with our work day part but a few things that will be big on transport are: Segway’s and public transport using less energy that means better for the environment.

Pollution is one of the main things we need to tackle thing to prevent pollution getting worse are: not relying on our cars so much if it is just a 5 minute journey in the car maybe try walking or cycling the government will support and encourage this if you do need to go somewhere a long away think about taking the bus or train. Another way is putting up solar panels on houses and mini wind propellers.New houses will be built with solar panels already put in.

Energy will be mainly relying on renewable sources though making sure that we don’t harm the species nearby.

Living will be in flats so we can home everyone most homes will be near the work place. Helping for the environment. We know all of this won’t come true in ten years but we want these things to happen as they are all important to us. The environment is important and we need to protect it.

Travel: In the future you may be have a way to work on a skateboard. This is because it is a very fun way of traveling and is more affordable you might need ten years to go. We need to know what will happen to the air in the future and the cars that are in the future.

Technology: In times we are not going to be using your computer to do it, we may need to go to a different type of laptop. At your shows your brain might not be in the Office. All papers are from the factories will go to one place and portable tablet might be coming that every needs to make sure they have they work all time.

Type of work you might be doing: Office jobs might be more popular because people will want to check out and make a new type of tech. Also, as there begins to be the making of robots we need office workers to programme them so we can have them in the future for use in our everyday lives.

The environment: You can see our sketch that we designed on the computer.

We designed this ourselves!
HELP US ENVISION THE FUTURE
1. What do you think your city will look like in 10 years?

Climate will be hotter

All cars are electric
More technology will be used e.g. iPads instead of paper. Everyone will have a set of basic technology to use. Tablets, phones and laptops will be provided and used everyday. Workplaces will be more comfortable for us e.g. comfy chairs. More robots will be used to do simple tasks so we don't have to. Everything will seem wonderful but it will slowly turn into a dystopian future. Leaders will try to make something that seems great but will go wrong. Anything that happens will end in a dystopian future.

HELP US ENVISION THE FUTURE

2. What do you think your future day at work will look like?
It becomes necessary to include solar panels on new buildings as solar panels will be virtually everywhere, even on roofs. This energy is very sustainable.

Small light bulbs installed on trees to be used as streetlighting energy source from the solar panels on that tree.

Hospital can be used for things such as research or for major surgeries. Drones transport medical personnel so doctors’ nurses are more readily available.

1. Eco
2. Our City
3. Fun

Eco

1. Small light bulbs installed on trees to be used as streetlighting energy source from the solar panels on that tree.
2. Hospital can be used for things such as research or for major surgeries. Drones transport medical personnel so doctors’ nurses are more readily available.

Our City

1. International currency like bitcoin, lower tax on garden plants, environmentally friendly items, etc. Tax system remains the same.
2. Portable shops, independent chain stores. Shops come on a timetabled basis to sell items. Can be used for all events: food, in advance. Can just be used as community greengrocer, pop-up, etc.

Fun

1. Hospitals become smaller because drones transport to the home, etc. Cancer treatment. Extra space can be used as green space for patients.
2. Collect rainwater for grey water, e.g., flushing toilets. We could also harness the kinetic energy when the rain comes.

HELP US ENVISION THE FUTURE
1. What do you think your city will look like in 10 years?

I think the city will have flying cars and the new life will be more things with technology.
HELP US ENVISON THE FUTURE

1. What do you think your city will look like in 10 years?

- There will be drones with cameras to watch over the city, or there will be drones to carry packages.
- Buildings will be modern with amazing technology.
- There will be driverless cars and trains.
For my future city, I have decided to design one which is still up into sections. With specific sections for specific purposes, the city would be easier to move around in. Having certain points such as grocery stores would be a plus, as well as having a central point to keep in touch with the city from the outside. There would be a scanner available, where the person could scan their ID to get a map of the city. The scanner would display a digital map as soon as the person scanned their ID. The scanner would also have a system to keep track of the number of people scanning in and out, so that the city would always know how many people are in the city at any given time.

The city would be powered by wind turbines and solar panels, which would be installed in the southern part of the city, closest to the large green space open to the public. In this area, the government would encourage residents to recycle materials, exercise machines, and solar equipment, where the public could use them and the energy generated would be collected to help power the city. The city would have a series of underground wires to provide the harvested energy to businesses, schools, and housing. Electricity would be provided without cost to all tax payers, although each house would have a certain quantity of energy, and if they ran over they would have to pay for the extra. There would be an area of the city filled with large glass domes to house the homeless which would have artificial heating inside them to ensure that homelessness wasn't a risk.

A lot of the jobs that people used to do would be replaced with robots, for example, the delivery of packages would be done using drones, as well as the role of the paramedic and chefs in restaurants. However, citizens would be required to pay a certain percentage of their profit to the government every month, and it would ensure that the government could fund things like teacher, and emergency services salaries, healthcare, and other similar services free. The city would encourage diversity, and have laws in place about discrimination. Discrimination against gender, sexuality, etc., would not be tolerated. Schools would also be strictly mixed sex, and there would be an alternate class for those who were not good at math or science. The schools would be provided through a VR headset, so the student could dip into the class and still receive education.

In my future city, everyone would have a unique ID card, with a unique code and barcode on it. The ID card would allow the citizens access to certain areas of the city, for example, schoolchildren's ID card would allow them access to the school section of the city, whereas it wouldn't allow them to enter the energy awareness section.
HELP US ENVISION THE FUTURE

1. What do you think your city will look like in 10 years?

I think that my city will look like a great big place with lots of buildings and lights with cars that can take you places by just saying where you want to go.

The cars will have sensors that can tell if you need something or not to prevent car crashes. The cars will also have a screen so you can type in where you want to go and when you have done that you press a green button to start the car and leave and a red button to stop the car at any time. The car will also have a button so that you can call the police in case of an emergency.
HELP US ENVISION THE FUTURE

2. What do you think your future day at work will look like?

In 10 years you will be able to jump up in the air and dance, but not jump on the floor. You will stay in the air.

When I'm older I want to be a dancer so I want in 10 years you will see dancing in the sky air.

Dancing in the air...

2. What do you think your future day at work will look like?

I don't know exactly what will be my job.
HELP US ENVISION THE FUTURE

1. What do you think your city will look like in 10 years?

There will be more electricity and technology. Cars will be made with more technology. The houses will be modern and people will be using much more technology. City might become bigger. Maybe there will be more buildings.
8:00am - Wake up, have a coffee that an automated machine has made for me.

8:10 - Coffee has been finished. I don't need to travel to work, everything can be done from the comfort of my home.

8:15 - I have got in contact with an ethics board. Just checked that there are no moral or ethical problems with my latest project.

12:30 - 4 hours later. I am now taking a lunch break. I have been working on creating and programming AI that can create and code malware. It's a long and boring process but whenever I make even a small breakthrough I know it is worth it all. Plus, the pay is really good.

13:00 - Lunch was really nice. All food is made by machines now, so it's quick and easy to get any food that I like. I will be working on something different this afternoon. My work is always changing and there is always something new to do everyday. I'll be doing some penetration testing probably, cyber security is also very important. I finish work at 6pm.

Most, if not all, jobs will require cyber skills and/or programming.

There will still be different jobs such as surgeons, chefs and teachers but the actual profession and practical part of the job will be performed by robots. Programmers will work with people in the specific field to create/improve these robots.

There are a lot of ethical and moral issues surrounding hacking at the moment.

This means that you would be frequently visiting an ethics board.

For example Nato, COBRA, UN, and many different governments would work together.
HELP US ENVISION THE FUTURE
2. What do you think your future day at work will look like?

Photography

My future job would be to be a photographer so I came up with the idea of having glasses that have a sensor on the side so when you want to take a photo just hold down the side center and there will also be a flash light on there to turn it on and off you need to hold down the lens sensor and the light in the middle will turn on.

There will also be an app you can download so when you take a photo it will go on the app and you will also be able to edit the photo using the app and you will be able to send the photos to be people using the app.
